N Video Converter Help

Overview

N Video Converter (NVC 2.0.154) monitors a designated source folder for incoming video files and automatically converts them to a specified output format using FFmpeg. Converted files are saved to a destination folder, while original files can be optionally moved to a backup location. The application operates continuously, enabling hands-free, real-time video processing and format standardization.

Main Features

1. Automatic Folder Monitoring & Conversion

- Monitors a source folder for new video files.
- Automatically converts detected files to your chosen format and settings.
- Moves original files to a backup folder or deletes them after retention period.
- Uses FFmpeg for conversion and FFprobe for inspection.

2. Modern User Interface

- Status indicators for monitoring, conversion, and lock state.
- Drag-and-drop support for quick file handling.
- Tooltips and contextual help throughout the UI.

3. Tabbed Interface

- **Monitoring Log:**
  View real-time logs of all monitoring and conversion activity.
- **Converted Files:**
  See a list of all files that have been converted, with success/failure indicators.
- **Video Inspection Tool:**
  Analyze video files in detail using the built-in inspection tool.

Video Inspection Tool

Summary Tab

- Drag and drop a video file onto the summary area.
- FFprobe is used to extract and display a readable summary (format, duration, codecs, resolution, etc.).
- Errors are shown if the file is missing or unreadable.

Detailed JSON Tab

- View full raw JSON output from FFprobe.

Settings

- Access settings via the menu icon.
- Configure source, destination, and optional backup folders.
- Set output format, codecs, resolution, framerate, and bitrates.
- Enable GPU acceleration (NVENC, QSV, AMF if available).
- Set time-based conversion windows to restrict active hours.
- Enable auto-run on startup and copy-only mode.
- Choose retention period for backup or auto-deletion.

Additional Features

- **Lock/Unlock Settings:** Prevent accidental changes.
- **Clear Buttons:** Clear logs or converted files list.
- **Persistent Settings:** All preferences are automatically saved and restored.
- **System Tray Support:** Runs unobtrusively in the background.

- Check the log for details: C:\Users\<username>\AppData\Roaming\VideoConverterApp\conversion_log.txt

---

Startup Configuration

To auto-launch on Windows startup:

1. Press Win+R, type shell:startup, and hit Enter.
2. Paste a shortcut to the executable in the folder.
